Metro Alignment Tool

Enhances client opportunity by exploring the relationship between cost & land value capture potential.

Project context

Major transport infrastructure investment generates significant benefits to various segments of society. Value capture mechanisms seek to retrieve a proportion of said benefit, over an extended period of time, to contribute toward the funding of the initial capital investment.

About the tool

The metro alignment tool makes it possible for clients and consultants to explore the relation between costs and land value capture potential very early in a project. Makes it easy to estimate the costs and value capture potential of many iterations of alignments
